

# Implementing SAP Workflow

# What is Workflow?

- A mechanism that automates business processes.
  - Ensures adherence to that process
  - Transparency of users and process
  - Process data available at your finger tips
  - Reporting exposes bottlenecks and inefficiencies

# Workflow Components

# Triggering Mechanisms

- Events (publish and subscribe mechanism)
  - Status Management
  - Change Documents
  - User Exits and others
- Manual Triggering
  - Various Function Modules

# Implementation Tips

- Use Check Function Modules\Start Conditions
- Use caching algorithms when writing custom BOR methods
- Don't create superfluous container elements
- Objects - not simple variables

# Important Workflow Transactions

- Workflow Builder (SWDD)
  - Development Environment
- Workflow Log (SWI1)
  - Administrative/Debugging Tool
- Business Workplace (SBWP)
  - SAP Inbox
- Business Object Builder (SWO1)
