

- Draw the plane above XY line with left side edge/side perpendicular to XY line.

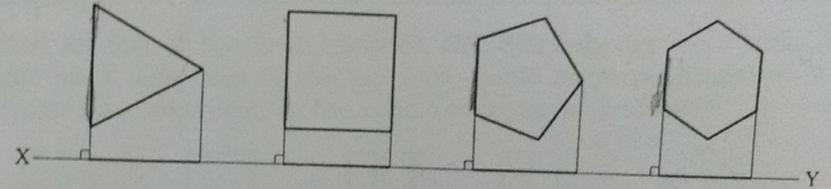

Fig. 6.8

- (iii) **Plane resting on one of its corner on HP.** Start the simple position as given below.

- Draw the plane below XY line with one of the corner should lies on the left hand side.

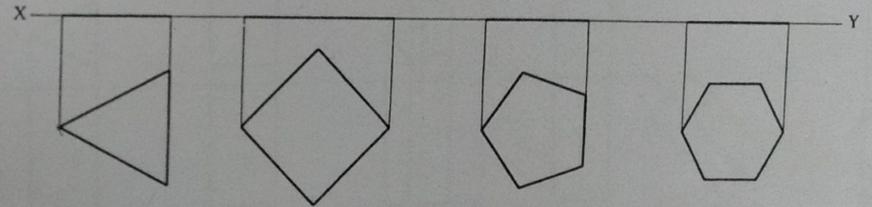

Fig. 6.9

- (iv) **Plane resting on one of its corner on VP.** Start the simple position as given below.

- Draw the plane above XY line with one of the corner should lies on the left hand side.

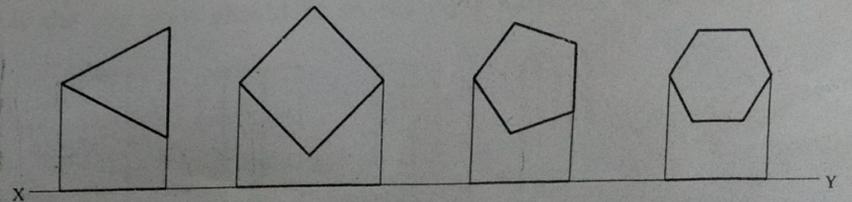

Fig. 6.10

Important Tips:

- (i) Planes resting on one of its edge/corner on HP means draw the simple position below the XY line (reference line)
- (ii) Planes resting on VP means draw the simple position above XY line.

Fig. 6.6

Tips to draw simple position

- (i) **Planes resting on one of its base side on HP.** Start the simple position as given below.

- Draw the plane below XY line with left side edge/side of the plane should be perpendicular to XY line.

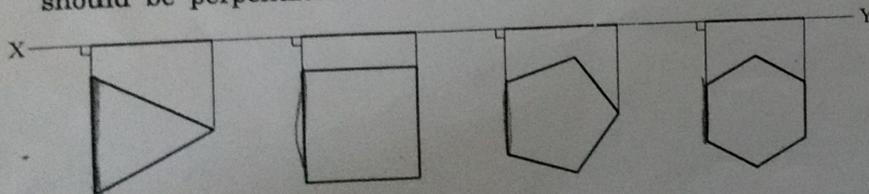

Fig. 6.7

- (ii) **Plane resting on one of its base side on VP.** Start the simple position as given below.
