Penetration test

Phase 1: Reconnaissance

- Information:
- IP addresses/URLs
 - Used for scanning phase
- Operating Systems used; Technology deployed
- Security used
- Personal information
 - E-Mail Addresses
 - Usernames
 - Employees,
 - Roles,
 - Hobbies,
 - ...
- everything

Questions on Theory

1. What are the phases in a Cyber attack?

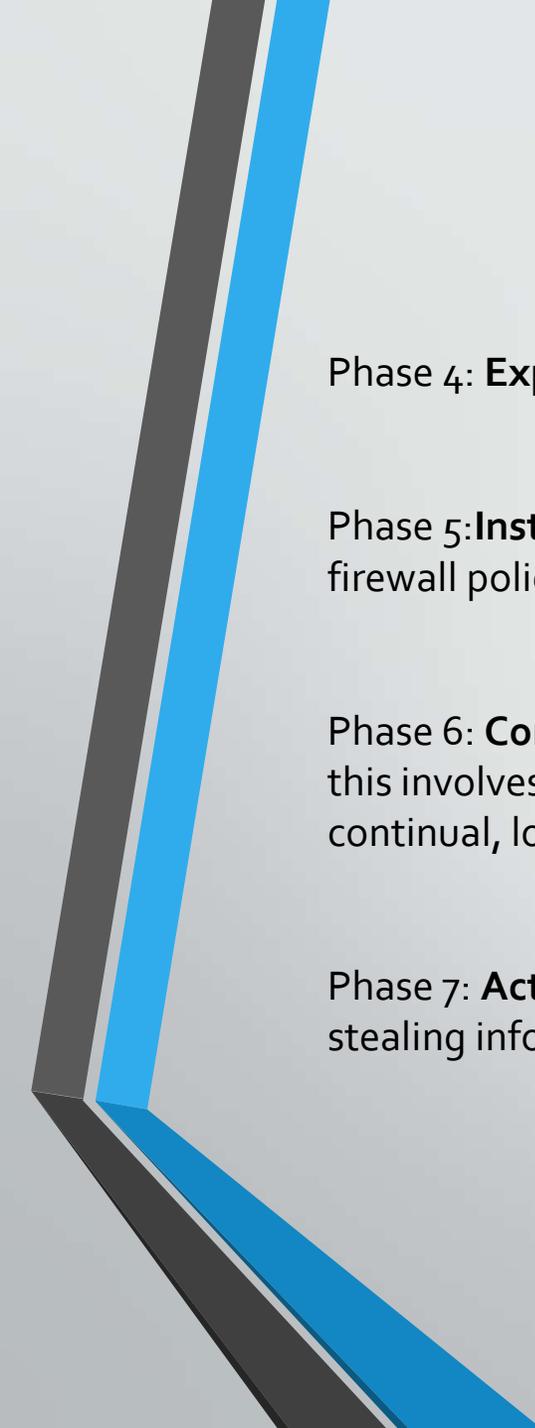

Answer:

The typical phases involved in cyber attack are as below:

Phase 1: **Reconnaissance** – Figuring out capability targets that satisfy the undertaking of the attackers (e.g., economic benefit, centered access to sensitive information, emblem damage).

Phase-2 **Weaponization** - Decide what defenses are in location, they pick their weapon, whether it's a zero-day take advantage of, a spear-phishing marketing campaign, bribing a worker, or some different.

Phase 3: **Delivery** – Now the assault starts. Phishing e-mails are dispatched with weaponized attachment

Phase 4: **Exploitation**– The hacker use the user names and passwords arrive in previous phase

Phase 5: **Installation**–Attacker start set up a continual backdoor, create Admin accounts at the network, disable firewall policies to makes positive that they retain to have get entry to the community .

Phase 6: **Command & control**–The compromised device is then used as a beachhead into an agency. commonly, this involves the attacker downloading and installing a remote-access Trojan (RAT) so they can set up continual, long-term, remote get right of entry to for your environment.

Phase 7: **Action & objective**: Now Attacker have overall control, they are able to gain their objectives. This will be stealing information on employees, customers, product designs, etc.

2. Are there different models for structuring a cyber attack? If so, which ones?

Answer:

Different models for structuring a cyber attack are as below

1. Attack graph approach
2. Attack tree approach
3. Cyber kill chain modelling approach
4. Diamond model
5. simulation approach model

Attack tree Model

AttackerTree model is ordinary approach for modelling cyber assaults. Cyber attack is represented in the shape of a tree. The attack tree constitutes a cyber attack situation by using constructing the final cyber attack goal as the root and sub-goals as leaves. In attack model based on an attacker's purpose was proposed to determine the role of an individual intrusion detection system (IDS) in a distributed IDS environment.

3. Why are different models used?

Answer:

The purpose of each cyber attack is different, that's why different models are used to serve different purposes.

The attack graph method is a technique of graphing all feasible paths that an attacker can assault by way of using data of hosts in a network.

The attack tree technique use tree concept constitutes a cyber assault scenario by means of building the final cyber attack goal as the root and sub-goals as leaves

The cyber kill chain is derived from the conventional military term—kill chain. A kill chain is a non-stop method from detecting a goal to destroying it.

The cyber analysis modeling evaluation tool provides a simulation toolkit to evaluate the threat and decorate the resiliency of cyber assaults

The diamond model is a novel version for cyber intrusion analysis. The version incorporates four primary additives: adversary, infrastructure, capability, and victim, all of which might be related in a diamond shape. Diamond-shaped nodes represent one assault event.

4. What is the approximate time horizon of a cyber attack?

Answer: Cyber attack is a practice to gain unauthorized access of smart device with the intent to cause harm. Sometimes cyber attack is also done for purpose to steal sensitive data / Information.

Many Sources find that during COVID-19 pandemic China also launches cyber attacks against India for secret of corona vaccine. In Oct2020 China launch 40,000+ times cyber attack in just 5 days. So, there is no fixed time horizon for cyber attack. However, Execute cyber attack frequently basis with different methods is best time frame.

5. What information sources can be used for a cyber attack? Can you give examples?

Answer:

A cyber attack is an attempt to avail unauthorized access to a computer/Laptop or smart phone with the intent to cause harm. Below sources can be used for cyber attack

- * Need Credential of system to attempt credential-based attack
- * Required Malware to attack information System. spyware and Trojans are best examples of malware.
- * Information about System IP address and MAC Address
- * MitM(Man- in-the-Middle) to attempt eavesdropping attacks
- * Unsecure public Wi-Fi
- * Structured Query Language (SQL) injection to execute SQL injection attacks.
- * Information about DNS protocol
- * Fraudulent communications through mail to steal sensitive data known as phishing

example: Texas ransomware attacks (August 2019)

WannaCry(May 2017)

6. How could the information collected be categorized?

Answer:

The information is classified in 4 major component

1. **Victim:** What is the profile of the person being attacked? Is the victim information being attacked publicly available (e.g., via the Internet)?
2. **Capability:** Did the attacker use any Malware? Did the attacker use a recognised hacking device
3. **Infrastructure:** Information about IP Address and Domain Name
4. **Adversary:** Information about physical infrastructure (hardware, operating system, Software version)

7. Explain the term OSINT.

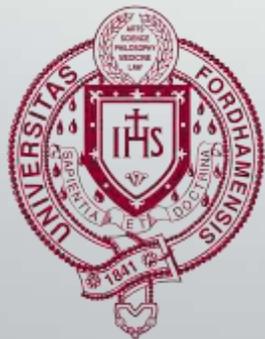

Answer:

OSINT, stands on open-source intelligence, is the exercise of collecting data from published or in any other case publicly available assets. OSINT operations, whether practiced by IT security professionals, malicious hackers, or country-sanctioned intelligence operatives, use advanced strategies to search through the giant haystack of visible information to discover the needles they're seeking out to obtain their goals and learn statistics that many don't understand is public.

Example: Maltego, Recon-ng, theHarvester, SpiderFoot, Babel X

Donald Trump

- Donald John Trump
- June 14 1946 (74 years old)
- New York
- Nationality: 
- Education:

Family

- Father: Fred Trump
- Mother: Mary Anne MacLeod

Everyone is now saying how right I was with illegal immigration & the wall. After Paris, they're all on the bandwagon.

— Donald J. Trump (@realDonaldTrump) [November 19, 2015](#)

Donald J. Trump  @realDonaldTrump · 8m

We don't want what is happening with immigration in Europe to happen with us!

 3.0K  2.7K  9.1K 

Donald J. Trump  @realDonaldTrump · 10m

The people of Germany are turning against their leadership as migration is rocking the already tenuous Berlin coalition. Crime in Germany is way up. Big mistake made all over Europe in allowing millions of people in who have so strongly and violently changed their culture!

Overview

The Lucerne University of Applied Sciences and Arts is one of seven universities of applied sciences in Switzerland. It was founded in 1997 and comprises of the Lucerne Schools of Engineering and Architecture, Business, Information Technology, Social Work, Art and Design and Music. It is the largest educational institution in the region and supported by the six central Swiss cantons Lucerne, Uri, Schwyz, Obwalden, Nidwalden and Zug.

The Lucerne University of Applied Sciences and Arts fulfils its mandate in the four areas of education, continuing and executive education, applied research and development, and services. The bachelor's and master's degree programmes follow the requirements of business, culture and civil society and prepare students for the needs of the job market. Ambitious professionals can choose from a wide range of continuing and executive education courses. At the moment, more than 6'200 students are enrolled and more than 4'500 persons are taking continuing education courses.

Because of its research activities and specialised services, the Lucerne University of Applied Sciences and Arts is an important and reliable partner for enterprises in the private sector, federations/associations and public authorities. It maintains an extensive national and international network.

Description

Hochschule Luzern bildet – forscht – begeistert
Die Hochschule Luzern ist mit aktuell rund 7 000 Studierenden in der Ausbildung, fast 4 500 in der Weiterbildung, 498 neuen Projekten in Forschung und Entwicklung die grösste Bildungsinstitution in der Zentralschweiz.

Die Hochschule Luzern vereinigt folgende sechs Departemente:

- Technik & Architektur
- Wirtschaft
- Soziale Arbeit
- Design & Kunst
- Musik
- Informatik

Vulnerabilities
Note: the device may not be impacted by all of these issues. The vulnerabilities are implied based on the software and version.

CVE-2018-15919 Remotely observable behaviour in auth-gss2.c in OpenSSH through 7.8 could be used by remote attackers to detect existence of users on a target system when GSS2 is in use. NOTE: the discoverer states "We understand that the OpenSSH developers do not want to treat such a username enumeration (or "oracle") as a vulnerability."

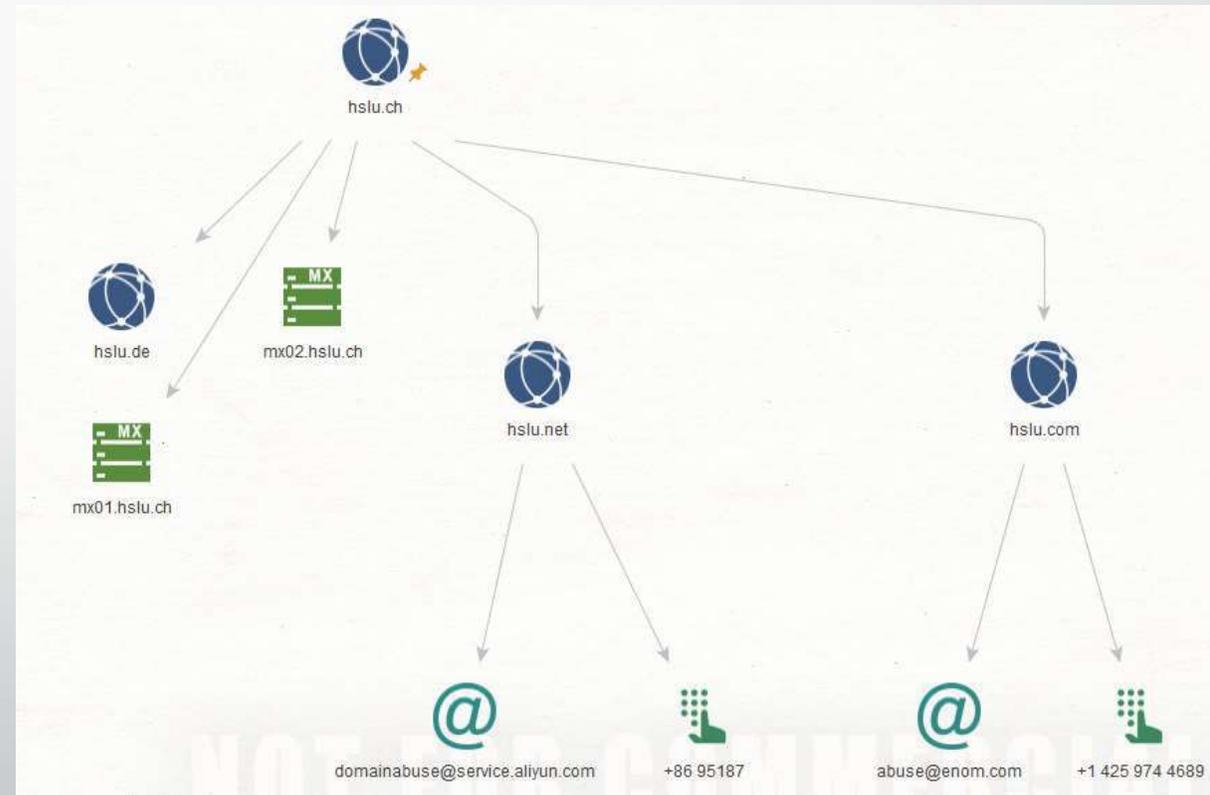

CVE-2017-15906 The process_open function in sftp-server.c in OpenSSH before 7.6 does not properly prevent write operations in readonly mode, which allows attackers to create zero-length files.
