

Write a minimum of 250 words. You should spend about 40 minutes on this task. Write about the following topic:

The **threat of nuclear** weapons maintains **world peace**. Nuclear power **provides cheap and clean energy**. The benefits of nuclear technology far outweigh the disadvantages. To what extent do you agree or disagree?

Give reasons for your answer and include any relevant examples from your knowledge or experience.

Man's search for energy to fulfill the demand is ever continuing. Power produced from nuclear source is providing us a pollution free environment. This essay will argue why the benefits we are reaping will not be worthy when compared to the destruction it can cause to our planet itself even with unintentional accident.

The advantages this man made energy providing us is multiple. Firstly it provides us non-contaminated earth to breath as it does not produce any pollutants in to the atmosphere after its use. Moreover, the production cost of this specific energy is less compared with the conventional fuel or petroleum products. For instance, as per the report published by a leading journal, though initial investment could be a matter of concern but less maintenance cost will definitely define it in the long run.

Conversely, the risk associated with nuclear plants is a matter of grave concern. The anticipated accidents which happened in multiple locations truly proves the uncontrollable damage it can cause not only to the people but also to the wide geographical area. Though, hypothetical, if it falls in the hands of rogue people, the result can be unimaginable when we consider what happened in Hiroshima and Nagasaki. And the bitter truth is that this was the hand work of people who consider themselves as world police.

Human beings quest for better life and thereby the need of energy to fulfill it will go on. This essay argued about the unpredictable risks associated with the use of the said form of energy and also the positive impacts it can have on our mother earth if all goes well.
