Tutoring objectives and process:

Objectives:

To bridge the gap (as brought out below) between curriculum and employment.

- Many upcoming Engineers lack the utility of the education they are receiving and the employment (in India and overseas) that they are wanting to get an employment that is waiting for them.
- They lack this information at the time of planning their career path.
- Many engineering colleges lack staff who can help them in this.
- Many upcoming engineers get carried away with social pressures.
- With this they pick up employment in which they are not confident

Process:

- I have given exposure / training to engineers, to technology (such as IOT) developments, business developments etc.
- I have mentored few final year engineers and most of them got benefitted with that. They scored distinction and very good employment that they are happy with.
- Conducted workshops on systems engineering for employees from various India and USA based organizations.

Courses being offered:

Course title	Topics (for the courses offered)	Duration (hours)	Highlights	Benefits to the students (trainee)
Business strategies	Modeling and simulation (M&S) with examples	2	No spoon feeding Mentoring approach Self-learning Example driven At the beginning of a course record the expectations and review at the end Horizontal cutting across all the verticals like, teleco, BFSI, rail etc. Forecasting, optimization, root cause analysis etc	Improved ability in correlating data & processes Improved ability in delivering agreed artifacts Over all confidence boosting
	Predictive analytics	3		
	Telecom Engineering	Min 5		
Systems Engineering	M & S with examples	4		
	Design validations including functional and non-functional features.	4		
	Reliability Eng	4		
	QA Engineering			
	Tools for simulations, analytics etc	3		
Performance engineering (PE)	Application (APE), Network (NPE)	6		
Advanced algorithms, technologies and solutions	Predictive analytics	3		
	MDM, iNoC etc	6		
	AI & M2M leading to IOT	6		

- Many upcoming Engineers lack the utility of the education they are receiving and the employment (in India and overseas) that they are wanting to get and employment that is waiting for them.
- They lack this information at the time of planning their career path.
- Many engineering colleges lack staff who can help them in this.
- Many upcoming engineers get carried away with social pressures.
- With this they pick up employment in which they are not confident

Feedback from students / Colleagues and Customers:

- ....Not many people can inspire you the way Dr. Gowri can!!....... ...., I found him extremely down to earth and approachable. He is a highly learned person and we were really fortunate to have an opportunity to interact with him. ....
- ....I've had the good fortune of acquiring niche performance modelling, design & engineering skills, working in the leadership of Dr. Gowri........... I automatically got a coach who would motivate us & create opportunities for us to go beyond ourselves & achieve what we never thought we could achieve; for eg. the IEEE paper publication was one such............ above all a kind and experienced mentor who would correct us just at the right times. At another level of leadership vision, candor, creativity and values are anyway part of his forte! I have seen him lead the team and take it from one success to another; keeping the team motivated even in some very tough times.
- ....It's a wonderful experience to work with 'doc' - he instilled the theme 'business oriented research' in me - which today I value the most. Doc is a unique combination of academic scholarship blended with the right sense of doing business. ....he has the skill of motivating people - right from graduate entry resources to sales representatives for doing the 'right things' ....
- .... comes with a rare ability of R&D orientation tempered with business understanding. .... He is a man of his words and delivers on his promise. He is a wonderful leader and a great human and his team loved to work for him. Doc built the Performance Engg and Modelling & Simulation practices at Tech Mahindra...............
- ....I have been greatly influenced by his leadership, thought process, ability to look at challenges from opportunity perspective and provide absolute simple but effective solutions. He is a good business man apart from being technically savvy, which is a rare combination. ....friendly, open and broad minded, always endorsing open door policy. He provokes his colleagues and teams to ensure they are always delivering beyond their dreams!
- ....professionally he is very clear on his subject. He is focused to the point of perfection........... he knows to keep his team together...........he has a very analytical thought process..............
