WRITING TASK-I

The chart below shows the change in the ownership of electrical appliances & amount of time spent doing housework in households in our country between 1920 - 2019

Summarise the info.

The pictorial representation of the above mentioned line graph shows the trend of how the access to various electrical appliances across households affected the duration of household chores over a period of a millennium.

The first graph depicts how the use of different appliances like washing machine, refrigerator and vacuum cleaner became a part of every home. Clearly, we can see a rise in number from zero in 1920 to 75-100% in the year 2019.

The refrigerator and vacuum cleaner were the most commonly utilized facilities which can be seen in almost every house in current times.

Although, washing machine is also popular among the people, its utility has seen a dip in for nearly a period of 20 years i.e., from 1960's to late 1990. Its sale picked up a boost from 2000's but still, it is lacking usage by a considerable margin of 20-25% as compared to refrigerator & vacuum cleaner.
