

# 1. Bricks , Beads and Bones

## Introduction

- Indus valley civilization is also known as Harappan civilization.
- It started flourishing along River Indus (now in Pakistan) at around 2600 B.C.
- Harappan civilization was the largest Bronze age civilization in the world
- Harappa was the first site of this civilization discovered by archaeologists
- It was an urban civilization. Its writing is not deciphered
- After 1900 B.C., most of the sites were abandoned due to some reasons
- By 1900 B.C. major part of the civilization ended

## Period of Harappan Civilization

- The civilization is dated between 2600 BCE and 1900 BCE
- The period of the civilization is broadly divided into three:
  - 1. The Early Harappan culture (Before 2600 BCE)
  - 2. The Mature Harappan culture (2600 BCE to 1900 BCE)
  - 3. The Late Harappan culture (After 1900)

## Some important sites of Harappan civilization

- Kalibangan, Lothal, Rakhi Garhi, Dholavira, Rupar, Harappa, Ganeriwala, Chanhudaro, Sutakagen Dor, Mohenjodaro, Amri, Balakot, Kot Diji, Rangpur, Nageshwar, Ganeriwala etc.

## Major Developments in Harappan Archaeology

- ✓ 1875-Report of Alexander Cunningham on Harappan seal
- ✓ 1924-John Marshall announced the discovery of Harappan civilization
- ✓ 1925-Excavation began at Mohenjodaro
- ✓ 1944-R E M Wheeler became the Director General of ASI
- ✓ 1946- R E M Wheeler excavates at Harappa
- ✓ 1955-S.R.Rao begins excavation at Lothal
- ✓ 1960-B.B Lal & B.K Thaper begins excavations at Kalibangan
- ✓ 1974-M.R.Mughal begins explorations in Bahawalpur
- ✓ 1990-R.S Bisht begins excavations at Dholavira.

## Early archaeological cultures

- ✚ There were several archaeological cultures in the region prior to the Mature Harappan.
- ✚ These cultures were associated with distinctive pottery, evidence of agriculture, pastoralism and some crafts.
- ✚ The settlements were small in size and had no large buildings

## Subsistence strategies of the people

- ❖ Subsistence strategies of the people included hunting and gathering, cultivation, pastoralism, and distribution.
- ❖ People relied on many plants and animals, fishing and agriculture for their food. There are evidences of bones of animals which prove that people consumed meat. Terracotta models of oxen, plough etc. show that people relied on agriculture too.

## 1. Bricks , Beads and Bones

### Different types of food available to the people

- The Harappans ate wide range of plants and animal products, including fish.
- Archaeologists found grain such as wheat, barley, lentils, chickpea and sesame at the Harappan sites.
- In Gujarat, Millets have been found. Rice was found rarely.
- Bones of cattle, fish, fowl, sheep, goat, buffalo, pig, boar, deer, and gharial are found at the sites. Studies indicate that these animals were either domesticated or hunted by the Harappans

### Agricultural technologies of Harappans

1. Agriculture was the main occupation of the Harappans.
2. The prevalence of agriculture is indicated by finds of grains.
3. It is very difficult to reconstruct actual agricultural practices carried out by the Harappans.
4. Terracotta sculptors of the bull and their representation on the seals indicate that bull was known to them.
5. From this, the archaeologists assume that the oxen were used for ploughing.
6. Moreover, the Archaeologists have also found terracotta models of the plough at sites in Cholistan and at Banwali (Haryana).
7. Evidence of a ploughed field, associated with early Harappan levels have also found at Kalibangan(Rajasthan)
8. The field had two sets of furrows at right angles to each other, suggesting that two different crops were grown together.
9. Most of the Harappan sites were located in semi-arid regions. So, to enhance agricultural produce they needed facilities of irrigation.
10. Traces of canals have been found at the Harappan site of Shortughai in Afghanistan.
11. It is also likely that water was drawn from wells was used for irrigation.
12. Besides, water reservoirs found in Dholavira (Gujarat) may have been used to store water for agriculture.
13. Processing of food required grinding equipment as well as vessels for mixing, blending and cooking. These equipments were made of stone, metal and terracotta

### Layout of Mohenjodaro: Architectural features of Mohenjodaro (Town Planning)

1. The most spectacular part of Harappan structure is the large scale town layout.
2. The city of Mohenjodaro was divided into two halves i.e. the Citadel and the lower city
3. **Citadel**- It was built on mud brick platforms. It was walled and separated from the Lower Town.
4. The citadel was probably used for special public purposes.
5. **The Lower Town** was walled. Several buildings were made on the platform that served as foundation.
6. Labour was mobilized at a very large scale.
7. The settlement was first planned and then implemented.
8. Bricks used in the buildings were uniform in size.
9. The roads and streets in the lower town were laid out in a grid pattern, intersecting at right angles.
10. The streets and drains were first laid out and then houses were built on the same pattern.
11. The Lower Town of Mohenjodaro provides examples of residential buildings.
12. Most of these were centered on a courtyard, with rooms on all sides.
13. Different activities like cooking, weaving etc. were carried out in the courtyard particularly during the hot and dry seasons.
14. There were no windows along the walls on the ground floor. So privacy could be maintained.
15. The main entrance did not provide view of courtyard and interior. Every house had bathroom paved with bricks which was connected through the wall to the street drains.

## 1. Bricks , Beads and Bones

16. In some houses remains of staircases to reach second storey or roof have been found.
17. Many houses had wells which were reachable from outside for the use of outsiders. It is estimated that the total number of wells in Mohenjodaro was about 700.

### Drainage System of the Harappans

- ❖ One of the striking features of Harappan cities was the well planned drainage system.
- ❖ Every house was connected to the street drains.
- ❖ The drains were made of mortar, lime and gypsum.
- ❖ They were covered with big bricks which could be lifted easily to clean the drains.
- ❖ For sewage from the houses, pits were provided at either side of the street.
- ❖ Very long drainage channels were provided at intervals with sumps for cleaning.
- ❖ In smaller settlements such as Lothal, the houses were built of mud bricks and drains were made of burnt bricks.
- ❖ Little heaps of materials mostly sand have frequently been found alongside the drains.
- ❖ This shows that the drains were cleaned at regular intervals.

### The Great Bath

- On citadel, some special buildings were built like 'The great bath of Mohenjodaro'.
- Such buildings were used on some religious occasions or on public gatherings
- The Great Bath was a large rectangular tank surrounded by corridors on all four sides.
- There were two flights of steps on north and south leading into the tank.
- The tank was made watertight by laying bricks on the edge and using mortar and gypsum.
- Rooms were made on three sides of the tank, with one room having a large well.
- The water from the tank flowed into a huge drain.
- Across the lane there was a smaller building with eight bathrooms, four at each side of a corridor, with drains from each bathroom connecting to a drain that ran along the corridor.

### Tracking Social Differences: Strategies to find out social differences

#### 1. Studying Burials

- Strategies to analyze social and economic differences amongst people living within a particular culture include study of burials.
- At burials in Harappan sites the dead were generally laid in pits.
- Some of the pits were lined by bricks.
- Some of the burials contained ornaments, pottery etc, may be a belief that these things can be used after life.
- In some instances the dead were buried with copper mirrors.
- Jewelleries were found in both men and women burials which mean that both men and women used ornaments.
- But in general, Harappans never believed in burying precious things with the dead.

#### 2.Studying Artefacts

- Studying artefacts is another strategy to find out social differences.
- Artefacts are divided into utilitarian and luxuries.
- **Utilitarian** artefacts include objects made of stone or clay. These include querns, pottery, needles, flesh-rubbers etc. and are usually found distributed throughout settlements.
- **Luxury** artefacts are rare objects made of valuable materials are generally concentrated in large settlements like Mohenjodaro and Harappa. For Example, little pots of faience were used as perfume bottles.

## **1. Bricks , Beads and Bones**

### **Finding out about craft production**

#### **Raw materials required for craft production**

- The variety of materials used to make beads is remarkable: stones like carnelian (of a beautiful red colour) jasper, crystal, quartz and steatite; metals like copper, bronze and gold; and shell, faience and terracotta or burnt clay.

#### **Methods of making craft by the Harappans**

- Sometimes beads were made of two or more stones by cementing together, while some of stone with gold caps.
- They were made in different shapes such as cylindrical, spherical, barrel-shaped, and segmented.
- Some were decorated by painting and some had designs etched on them.
- They made bangles, ladles out of shells.
- Special tools were used for craft work.
- Specialized drills have been found at Chanhudaro, Lothal and more recently at Dholavira.
- Nageshwar and Balakot were specialized centres for making shell objects.
- Chanhudaro was the centre of crafts production. It was specialist in bead-making, shell-cutting, metal-working, seal-making and weight-making.

#### **Identifying centres of production.**

- How centers of production were identified by the archaeologists? Simply by evidences of tools, raw materials, unfinished objects, rejects, waste materials, etc.

#### **Strategies for procuring materials for craft production**

- The Harappans procured materials for craft production in various ways.
- Two methods of procuring materials for craft production
  - They established settlements in Nageshwar, Balakot and Shortughai.
  - They might have sent expeditions to areas such as the khetri region of Rajasthan (for copper) and south India (for gold).
- Nageshwar and Balakot were areas for shell.
- Shortughai, in far-off Afghanistan, was the best source of lapis-lazuli, and Lothal which was near sources of carnelian, steatite from south Rajasthan and north Gujarat and metal from Rajasthan.
- Expeditions to the khetri region and south India established communication with local communities.

#### **Contact with distant lands (Trade relation with the world)**

- Archaeological finds suggest that the Harappans maintained long distance trade.
- The main source of long distance contacts includes seals, weights, dice and beads.
- Harappans probably had trade contacts with the Oman peninsula.
- Chemical analyses have shown that both the Omani copper and Harappan artefacts have traces of nickel, which suggests a common origin.
- There are similarities between certain other types of objects found at this site.
- A Harappan jar coated with a thick layer of black clay has been found in Oman.
- Mesopotamian texts refer to contact with regions named Dilmun (probably the island of Bahrain), Magan and Meluhaha, possibly the Harappan.

## 1. Bricks , Beads and Bones

### Seals and Sealings

- Seals and Sealings were used to facilitate long distance communication.
- When a bag of goods was sent from one place to another, its mouth was tied with a rope.
- On the knot was affixed some wet clay on which one or more seals were pressed, leaving an impression.
- If the bag reached with its sealing intact, it meant that it had not been tampered with.
- The sealing established the identity of the sender.

### Characteristics of Seals and Script

- Harappan seals usually have a line of writing.
- Seal had the name and title of the owner.
- The seal had a motif (generally an animal) which conveyed a meaning to those who could not read.
- Seals were basically used to convey the identity of the sender and to facilitate long distance communication.
- The Harappan inscriptions are short.
- The script was not alphabetical and written right to left.
- Many signs were used and they are around 375-400 in numbers.
- The script still remains undeciphered to date.

### Weights

- ✚ Exchangers were regulated by a precise system of weights usually made of a stone called chert (a kind of stone, generally cubical with no markings).
- ✚ Lower denominations of weights were binary (1, 2,4,8,16,32 etc.), while the higher denominations followed the decimal system

### Ancient Authority

- **Different arguments put forwarded by the archaeologists over the central authority of Harappa**
- There are three major views about the existence of a central authority in the Harappan society.
- Some archaeologists are of the opinion that there were no rulers in the Harappan society and that everybody enjoyed equal status.
- Others are of the opinion that there was no single ruler but several rulers. Monenjodaro had a separate ruler, Harappa had separate and so on.
- Some others suggest that there was a single state. This theory was based on the similarity of artefacts, planned settlements etc.
- The last opinion considers being more plausible as it is doubtful that such complex decisions were made and implemented collectively by entire communities.

### The End of the Civilization

#### The Evidences that reflected the disappearance of Harappan civilization by 1800 BCE

- By 1800BCE most of the mature Harappan sites were abandoned.
- The expansion of population and its migration took place towards Gujarat, Haryana, Western U.P etc.
- After 1900B.C.sites which existed marked the transformation of material culture i.e. disappearance of distinctive artefacts of civilization like weights, seals, distant trade, etc. Writing, long-distance trade, and craft specialization also disappeared.
- House construction techniques deteriorated and large public structures were no longer produced.
- This indicates a rural way of life named late Harappan

## 1. Bricks , Beads and Bones

### Several explanations for the decline of Harappan civilization

- ✦ The reasons responsible for the end of the civilization is still unknown. But probable reasons are;
- ✦ Climatic Change
- ✦ Deforestation
- ✦ Excessive floods
- ✦ Over use of the landscape
- ✦ The shifting and or drying up of rivers
- ✦ Invasion most probably by the Aryans
- ✦ Harappan state might have ended because there are evidences of absence of distinctive art facts like seals, pottery, etc

### Discovering the Harappan Civilization

#### Cunningham and his Confusions

- ❖ Cunningham was the first Director General of ASI (Archaeological Survey of India).
- ❖ He was known as the father of Indian archaeology.
- ❖ He began archaeological excavations in the mid 19<sup>th</sup> century.
- ❖ His main interest was in the archaeology of early history from 6<sup>th</sup> century BCE-4<sup>th</sup> century CE, and later periods.
- ❖ He used the accounts left by Chinese pilgrims who had visited the subcontinent between the 4<sup>th</sup> and 7<sup>th</sup> centuries CE.
- ❖ He also collected, documented and translated inscriptions found during his surveys.
- ❖ Site like Harappa did not fit well in his area of investigation.
- ❖ Although Harappan artefacts were found during the 19<sup>th</sup> century and some of these reached Cunningham.
- ❖ But he did not realize how old these were as they were not part of the itinerary of Chinese pilgrims and was not known as an Early Historic city.
- ❖ An English man gave a Harappan seal to Cunningham.
- ❖ But he was unable to place it in the time frame with which he was familiar. He thought that Indian history began with the first cities in the Ganga valley.
- ❖ So, it is assumed that he missed the significance of Harappa.

#### Different methods adopted by Marshall and Wheeler in reconstructing Harappan civilization

- Daya Ram Sahni and Rakhal Das Banerji found similar seals at Harappa and Mohenjodaro respectively.
- Based on these finds, in 1924, John Marshall, Director General of the ASI, announced the discovery of a new civilization in the Indus valley to the world.
- Marshall tended to excavate along regular horizontal units, measured uniformly throughout the mound, ignoring stratigraphy of the site.
- This meant that all the artefacts recovered from the same unit were grouped together, even if they were found at different stratigraphic layers.
- As a result, valuable information about the context of these finds was irretrievably lost.
- R.E.M Wheeler rectified this problem. He recognized that it was necessary to follow the stratigraphy of the mound rather than dig mechanically along uniform horizontal lines.

## 1. Bricks , Beads and Bones

### **Problems faced by archaeologists in the interpretation of religious practices of Harappa**

- a. Material remains help the archaeologists to reconstruct Harappan life.
- b. Harappan script is not helpful in understanding the Harappan civilization. The script remains undeciphered till date.
- c. Organic material such as cloth, leather, wood and reeds generally decomposed while stone, burnt clay, metal etc. survive. Materials such as pottery, tools, ornaments, and house hold objects are available.
- d. Recovering artefacts is just the beginning of the archaeological enterprise. Archaeologists then classify their finds.
- e. The second, and most complicated, is in terms of function: archaeologists have to decide whether, for instance, an artifact is a tool or an ornament, or both, or something meant for ritual use.
- f. An understanding of the function of an artefact is often shaped by its resemblance with present- day things-beads, querns, stone blades and pots are obvious examples.
- g. Archaeologists also try to identify the function of an artefact by investigating the context in which it was found. Whether it was found in a house, in drain, grave or in kiln.
- h. The problems of archaeological interpretation are perhaps most evident in attempts to reconstruct religious practices.
- i. Attempts have also been made to reconstruct religious beliefs and practices by examining seals, some of which seem to depict ritual scenes. Others, with plant motifs, are thought to indicate nature worship.
- j. Many reconstructions of Harappan religion are made on the assumption that later traditions provide parallels with earlier ones. This is because archaeologists often move from the known to the unknown, that is, from the present to the past.

### **Archaeologist's attempts to reconstruct the religious practices of Harappan people**

- The discovery of pots, querns, beads etc in the Harappan sites and their graves provide enormous information
- Traces of cotton and dresses depicted on seals and sculptures, give us an idea about the dressing style of the Harappan people
- The terracotta figurines of women indicate the worship of mother goddess.
- Plant motifs seem to suggest the practice of nature worship. The conical stones indicate linga worship
- In Some seals a figure shown seated cross legged in a 'yogic' posture, sometimes surrounded by animals has been regarded as a depiction of proto-Siva that is an early form of one of the major deities of Hinduism.
- Some animals such as the unicorn depicted on seals seem to be mythical, composite creatures.
- The two important structures that have been found by archaeologists are: The fire altars found at Kalibangan and Lothal and The Great Bath at Mohenjodaro, something meant for ritual use.

## 1. Bricks , Beads and Bones

### Key words (Refer Text Book Instructions regarding contents)

**Hoard:** Hoards are objects kept carefully by people, often inside containers such as pots.

**Stratigraphy:** The study of layers.

**Linga:** A linga is a polished stone that is worshipped as a symbol of Shiva.

**Shamans:** Shamans are men and women who claim magical and healing powers, as well as an ability to communicate with the other world.

**Saddle querns:** Saddle querns were the only means of grinding cereals and pulses. They were made of hard, gritty rock or sandstone. The remains of saddle querns show signs of hard usage.

**Curry stones:** The type of quern in which the second stone was used as pounder, which eventually made a cavity in the base stone was called curry stones. This type was possibly used only for pounding herbs and spices for making curries.

**Chert:** Chert was a type of stone, generally cubical with no markings. It was used in the system of weight by the people of Harappan people.

### **Evidence of an ‘invasion’-Theories propounded by scholars.**

➤ **John Marshall (*Mohenjodaro and the Indus Civilization, 1931*)**

- John Marshall presented the evidence of a massacre in Mohenjodaro in 1925. Skeletons of people with ornaments were found from the site. This indicates that the Harappan civilization was destroyed by foreign invasion.

➤ **R.E.M Wheeler (*Harappa 1946, Ancient india, 1947*)**

- ❖ In 1947, R.E.M Wheeler, then Director –General of the ASI, tried to correlate this archaeological evidence with Rigveda. The Rigveda mentions pur, meaning rampart, fort or stronghold. Indra, the Aryan war-god is called purandara, the fort destroyer. It is assumed that as Wheeler put it, “Indra stands accused” of destroying the cities of the Harappan civilization and of the responsibility for the massacre at Mohenjodaro.

➤ **G.F Dales (*The Mythical Massacre at Mohenjodaro, Expedition, 1964*)**

- In the 1960s, this theory was opposed by an archaeologist named George Dales. He demonstrated that the skeletons found at the site did not belong to the same period. There is no sign of extensive burning, no bodies of warriors clad in armour and surrounded by weapons war.

# 1. Bricks , Beads and Bones

## Theme 1 Map Study

### Some important mature Harappan sites

#### **Model Questions**

- 1.The first discovered Harappan site
- 2.One Harappan site in Haryana
- 3.The site where fire altars and ploughed field found
- 4.A specialised centre for shell making
- 5 The most recently discovered site in Haryana
- 6.The site where water reservoirs found
7. One specialized centre for shell making
8. The Important Harappan site from Gujarat
9. The site where R.D Banerji conducted excavations
- 10 The major centre of bead making
- 11 One Harappan site now in Pakistan.

#### **Answers**

1. Harappa
2. Banwali
3. Kalibangan
4. Balakot
5. Rakhi Garhi
6. Dholavira
7. Nageshwar
8. Lothal
9. Mohenjodaro
10. Chanhudaro
11. Kot Diji
