
Contents

Module 1: Getting started with Windows PowerShell

Module Overview

Lesson 1: Overview and background of Windows PowerShell

Lab A: Configuring Windows PowerShell

Lesson 2: Understanding command syntax

Lesson 3: Finding commands

Lab B: Finding and running basic commands

Module Review and Takeaways

Module 2: Cmdlets for administration

Module Overview

Lesson 1: Active Directory administration cmdlets

Lesson 2: Network configuration cmdlets

Lesson 3: Other server administration cmdlets

Lab: Windows administration

Module Review and Takeaways

Module 3: Working with the Windows PowerShell pipeline

Module Overview

Lesson 1: Understanding the pipeline

Lesson 2: Selecting, sorting, and measuring objects

Lab A: Using the pipeline

Lesson 3: Filtering objects out of the pipeline

Lab B: Filtering objects

Lesson 4: Enumerating objects in the pipeline

Lab C: Enumerating objects

Lesson 5: Sending pipeline data as output

Lab D: Sending output to a file

Module Review and Takeaways

Module 4: Understanding how the pipeline works

Module Overview

Lesson 1: Passing pipeline data

Lesson 2: Advanced techniques for passing pipeline data

Lab: Working with pipeline parameter binding

Module Review and Takeaways

Module 5: Using PSProviders and PSDrives

Module Overview

Lesson 1: Using PSProviders

Lesson 2: Using PSDrives

Lab: Using PSProviders and PSDrives

Module Review and Takeaways

Module 6: Querying management information by using CIM and WMI

Module Overview

Lesson 1: Understanding CIM and WMI

Lesson 2: Querying data by using CIM and WMI

Lesson 3: Making changes by using CIM and WMI

Lab: Working with CIM and WMI

Module Review and Takeaways

Module 7: Working with variables, arrays, and hash tables

Module Overview

Lesson 1: Using variables

Lesson 2: Manipulating variables

Lesson 3: Manipulating arrays and hash tables

Lab: Working with variables

Module Review and Takeaways

Module 8: Basic scripting

Module Overview

Lesson 1: Introduction to scripting

Lesson 2: Scripting constructs

Lesson 3: Importing data from files

Lab: Basic scripting

Module Review and Takeaways

Module 9: Advanced scripting

Module Overview

Lesson 1: Accepting user input

Lesson 2: Overview of script documentation

Lab A: Accepting data from users

Lesson 3: Troubleshooting and error handling

Lesson 4: Functions and modules

Lab B: Implementing functions and modules

Module Review and Takeaways

Module 10: Administering remote computers

Module Overview

Lesson 1: Using basic Windows PowerShell remoting

Lesson 2: Using advanced Windows PowerShell remoting techniques

Lab A: Using basic remoting

Lesson 3: Using PSSessions

Lab B: Using PSSessions

Module Review and Takeaways

Module 11: Using background jobs and scheduled jobs

Module Overview

Lesson 1: Using background jobs

Lesson 2: Using scheduled jobs

Lab: Using background jobs and scheduled jobs

Module Review and Takeaways

Module 12: Using advanced Windows PowerShell techniques

Module Overview

Lesson 1: Creating profile scripts

Lesson 2: Using advanced techniques

Lab: Practicing advanced techniques

Module Review and Takeaways

Lab Answer Keys

Module 1 Lab A: Configuring Windows PowerShell

Module 1 Lab B: Finding and running basic commands

Module 2 Lab: Windows administration

Module 3 Lab A: Using the pipeline

Module 3 Lab B: Filtering objects

Module 3 Lab C: Enumerating objects

Module 3 Lab D: Sending output to a file

Module 4 Lab: Working with pipeline parameter binding

Module 5 Lab: Using PSProviders and PSDrives

Module 6 Lab: Working with CIM and WMI

Module 7 Lab: Working with variables

Module 8 Lab: Basic scripting

Module 9 Lab A: Accepting data from users

Module 9 Lab B: Implementing functions and modules

Module 10 Lab A: Using basic remoting

Module 10 Lab B: Using PSSessions

Module 11 Lab: Using background jobs and scheduled jobs

Module 12 Lab: Practicing advanced techniques
