

Advanced Photography Course

Combining complex theory with practical elements, our Advanced Photography course provides plenty of hands-on learning to take your photography skills to the next level.

- **Light:** understand the colour and behaviour of light (natural, artificial, direction, shape, form and quality)
- **Camera settings:** explore advanced settings and commands on DSLR cameras
- **Lenses:** learn about lens selection, accessories and fine adjustment of your lens and focusing
- **Advanced Focus:** learn about hyperfocal distance and how to take sharp images of still or moving objects
- **Light Meter:** metering your subject and metering modes explained in depth
- **Accessories:** learn about camera accessories which can enhance photographs including reflectors, diffusers and light shapers.
- **White Balance:** understand how to achieve correctly colour balanced images
- **Exposure:** all advanced exposure techniques covered including exposure bracketing, exposure compensation and the magic triangle dynamics
- **Histograms:** learn how to read the histograms and benefit from this info to achieve better balanced exposures
- **Flash:** how to achieve greater images using your flashgun / speedlite
- **Filters:** understand the effects and appropriate use of different filters for different types of photography (fashion, portrait, landscape etc)
- **Composition Techniques:** understand the compositional elements of a photograph and how they can be used to create stronger images
