1. Getting Started
SQL Server core concepts
SQL Server editions
Applications included with SQL Server

2. Installing SQL Server 2012 R2
Preparing for installation
Creating service accounts
Installing SQL Server
Post-installation checks
Installing sample databases

3. Tools and System Databases
Introduction to SQL Server Management Studio
Introduction to SQL Server Books Online
SQL Server system databases

3. Database Modeling: Tables
Introduction to database modeling
Planning and creating SQL Server database
Identifying columns and selecting data types
Choosing primary keys
Using composite keys
Creating default values
Creating check constraints
Creating unique constraints

4. Database Modeling: Relationships
Creating relationships
Defining one-to-many relationships
Exploring one-to-one relationships
Exploring many-to-many relationships
Understanding relationship rules and referential integrity

5. Database Modeling: Optimization
Understanding normalization
First normal form
Second normal form
Third normal form
Database de normalization
Creating computed columns

6. Importing Existing Data

Using the SQL Server Import and Export Wizard

Importing Excel files into SQL Server

Importing CSV files into SQL Server

Importing Access databases into SQL Server

7. Retrieving Data with SQL

Introduction to Transact-SQL

Using SELECT statements and SQL Syntax Overview

Formatting SQL

Dealing with nulls - ISNULL, COALESCE and CASE

Controlling column behaviors with constraints

Creating an ID column

Filtering data with WHERE, LIKE, and IN, BETWEEN, AND, OR, NOT

Removing duplicates with SELECT DISTINCT

8. Sorting with ORDER BY

Ordering by a Single Column

Sorting Data based on Collation

Sorting Data in Descending Sequence

Sorting Data Based on Column Not In SELECT List

Sorting Data based on Column Ordinal Position

Sorting Data Based on Multiple Columns

Numeric Character Data Sorted Alphabetically

9. Inserting and Updating Data

Inserting Single Records into a Table

Inserting Multiple Rows of Data into a Table

SELECT INTO - Making a New Table from Existing Rows

Updating Every Record in a Table

Using Criteria When Updating Records

Referring to Other Tables When Updating Records

Deleting Records from a Table

Deleting Records from Different Tables

Deleting Every Record from a Table

Difference between Delete, Drop and Truncate

Using the OUTPUT clause to return inserted keys and GUIDs

10. Joining and Splitting Tables

Creating joins using your Mouse - the Query Editor

Writing Inner Joins in SQL

Joining more than 2 tables together

Joining tables from different databases
Using WHERE as an Alternative to INNER JOIN
The Limitations of Inner Joins
Full, Left and Right Outer Joins in SQL
Deciding on the Order of the Join
Showing Unmatched Records
Outer Joins with Multiple Tables
Cross Joins using SQL
Self-Joins in SQL (joining a table to itself)
Using MERGE, UNION, and INTERSECT AND EXCEPT to combine different tables

11. Grouping Data
Grouping by a Single Column
Grouping by Multiple Columns
Using an Expression in the GROUP BY Clause
Restricting result set by using HAVING clause
Difference between Where and Having

12. Advanced Group by clause
Using the ROLLUP operator to Create Subtotals and a Grand Total
Using the CUBE Operator to create a Superset of Aggregated Values
Creating Multiple Aggregated Groupings using the GROUPING SETS Operator

13. TOP Clause
Simple Example of the TOP Clause
Using the PRECENT option of the TOP Clause
Using a Variable to Control the TOP Clause
USING the WITH TIES Option
USING the TOP clause with UPDATE, Insert and Delete Statement
Caution When Using TOP Clause in UNION, EXCEPT and INTERSECT Statements

14. SQL Functions
Introduction to SQL functions
Using SQL configuration functions
Arithmetic and numerical functions like Abs, Ceiling, Floor,Power, Round,Sign,Sqrt,Square etc
String functions like Charindex,Replace,Stuff,Patindex,Left,Right,Substring,Reverse,Len,Ltrim,Rtrim etc
Date and Time Functions like Dateadd,Datepart,Datename,datediff etc
Formatting Dates and Times in SQl

15. VIEWS
Creating View Using View Designer
Scripting Views Using SQL

Advantages and Disadvantages of Creating Views
Subqueries
Finding the Highest or Lowest Value in a Column
Finding Records Above or Below Average
Using ALL, ANY, SOME and IN with Subqueries
Creating a Correlated Subquery
Correlated Subqueries using ALL and ANY

16. Variables
Declaring Variables
Assigning values to variables - SET versus SELECT
Incrementing and decrementing integer variables
The Scope of Variables
Uses of Variables in SQL
Global Variables in SQL - @@Identity,@@RowCount,@@Error,@@ServerName,@@Trancount etc

17. Conditions in SQl
IF-ELSE
Syntax of a simple IF statement
Multiple IF conditions using ELSE
Using EXISTS to see if records exist
Using variables to compare two counts
Case when Statement

18. Loops
The Basic Syntax of a WHILE Loop
Examples of using WHILE Loop
The BREAK Statement
Getting Stuck in an Endless Loop

19. Debugging and Error Handling
Error Handling
Error Functions in SQL
Debugging Options – Stepping over and Stepping out of the code
Changing the next statement executed
Using BreakPoints
Using Locals Window,Watch Window,Immediate Window,Call stack
Practical Example of Error Handling
Raising Errors – Using THROW, Using RAISE ERROR

20. Stored Procedures
Views versus Stored Procedures

The Syntax for Creating a Basic Stored Procedure
Different ways of Running Stored Procedure
Altering Stored Procedure
Passing Parameters to Stored Procedures
Reasons for using Parameters and limitations of stored procedures
Returning Values from Stored Procedures
Using Output Parameters in Stored Procedures

21. Functions
Scalar User-Defined Functions in SQL Server
Creating and Using Custom Functions
Passing Parameters to Functions
Altering and Deleting Functions
Writing Complex User Defined Functions

22. Transactions
Beginning Transactions in SQL Server
Using Transactions with Error Handling
Automatic Rollback of Transactions
Nesting Transactions
Creating and Rolling Back to a Savepoint
Using Savepoints in Stored Procedures

23. Temporary Tables
Usage of Temporary Tables
Dropping Temporary Tables - Object_Id or BEGIN TRY
Pros and Cons of Temporary Tables

24. Table Variables
Syntax of Temporary Variables
Usage of Table Variables
Pros and Cons of Table Variables

25. Table-valued functions in SQL
Simple (in-line) table-valued functions
Multi-Statement Table-Valued Functions
Limitations of table-valued functions
OUTER and CROSS APPLY joins

26. CTEs in SQL - Common Table Expressions
Example of a Common Table Expression
Common Problems with CTEs

Recursive CTEs

26. Derived Tables in SQL Server
Why Use Derived Tables?
Shortening Complex Queries with Derived Tables

27. Pivoting Data in SQL Server
Using Pivot Operator in SQL
Dynamic Pivot tables

28. Triggers in SQL
DDL Triggers
DML Triggers
Logon Triggers

29. Cursors
Why Use Cursors?
Declaring and Using Cursors
Fetching Records with an SQL Cursor
SQL Cursor Options
Updating Records using a Cursor

30. Core Administration Tasks
Understanding and creating indexes
Monitoring and rebuilding indexes
Monitoring database size and integrity
SQL Server Agent Jobs

31. Backing Up and Restoring
Creating backups
Creating differential backups and using backup compression
Restoring databases

32. Security Features
Introduction to SQL Server security and permissions
Adding a Windows user to the database
Creating SQL Server logins and switching authentication modes
