

Air And Water

Air and water are the natural resources of the environment. Air is all around us. Human beings, animals and plants need air to live. We cannot see air but can feel it.

Air

- Moving air is called wind.
- Gentle moving air is called breeze.
- Strong moving air is called a storm.

Uses of Air

- It is filled up with balloons and swimming tubes.
- It is filled in the tubes inside the tires.
- It helps to dry clothes.
- It helps to move sailboats and windmills.
- It makes the fire burn.
- It is used for flying kites.

Water

Water is an essential resource. We need water to live and grow. Animals and plants also need water to live and grow. The water can be used for various things such as-

Sources of water

Rain is the main source of water. Some rainwater fills rivers, ponds, seas and oceans. Some water seeps into the ground which is called underground water that can be consumed from hand pumps, tube wells and wells.
