

## *VPS Academy*

*An automation testing tool is able to playback pre-recorded and predefined compare the results to the expected behavior and report the success or failure of these manual test to a test engineer. Once automated tests are created they can easily be repeated and they can be extended to perform tasks impossible with manual testing. Because of this, savvy managers have found that automated software testing is an essential component of successful development projects.*

*Learn at VPS Academy to be the great professional and prove to be the best.....*
