

Contents

Unit I – Network Fundamentals

- Basic Elements of Network

- Network Protocols

- Routing – How the packets are handled

- The Anatomy of IP address

- Public and Private addresses

- Overview of IPv6

- Basic Subnetting

- Leaf-spine (leaf-spine architecture)

- SOHO network: Requirements, planning and implementation

- Key Differences of On Premise vs. Cloud

Unit II – Network Access

- The Hierarchical Network Model

- Basic Switch Configuration

- Introducing VLANs

- Switch Port Membership Modes

- VTP Operation

- Cisco Discovery Protocol (CDP)

- Managing WLANs

Unit III – IP Routing

- Basic Router Configuration

- Static Routing

- Role of Dynamic Routing Protocol

- Purpose of Metric

- Administrative distances

- Operations Of Eigrp

- OSPF Configuration

- Configure and Verify IPV6 static routing

Unit IV – IP Services

- Scaling Networks with NAT

- Configure and verify NTP operating in a client/server mode

- What is DHCP?

What is SNMP?

Syslog

Unit V – Security Concepts

Port Security

DHCP Snooping

Dynamic ARP Inspection

IP Source Guard

AAA (Authentication, Authorization and Accounting)

Introduction to Wireless Security Protocols

Configure WLAN using WPA2 PSK using the GUI

Packet Filtering with Access Control Lists
