

## Exercise 1.1 Page: 5

**1. Is zero a rational number? Can you write it in the form  $p/q$  where  $p$  and  $q$  are integers and  $q \neq 0$ ?**

Solution:

We know that, a number is said to be rational if it can be written in the form  $p/q$ , where  $p$  and  $q$  are integers and  $q \neq 0$ .

Taking the case of '0',

Zero can be written in the form  $0/1, 0/2, 0/3 \dots$  as well as  $, 0/-1, 0/-2, 0/-3 \dots$

Since it satisfies the necessary condition, we can conclude that 0 can be written in the  $p/q$  form, where  $q$  can either be positive or negative number.

Hence, 0 is a rational number.

**2. Find six rational numbers between 3 and 4.**

Solution:

There are infinite rational numbers between 3 and 4.

As we have to find 6 rational numbers between 3 and 4, we will multiply both the numbers, 3 and 4, with  $6+1 = 7$  (or any number greater than 6)

$$\text{i.e., } 3 \times (7/7) = 21/7$$

and,  $4 \times (7/7) = 28/7$ . The numbers in between  $21/7$  and  $28/7$  will be rational and will fall between 3 and 4.

Hence,  $22/7, 23/7, 24/7, 25/7, 26/7, 27/7$  are the 6 rational numbers between 3 and 4.

**3. Find five rational numbers between  $3/5$  and  $4/5$ .**

Solution:

There are infinite rational numbers between  $3/5$  and  $4/5$ .

To find out 5 rational numbers between  $3/5$  and  $4/5$ , we will multiply both the numbers  $3/5$  and  $4/5$

with  $5+1=6$  (or any number greater than 5)

$$\text{i.e., } (3/5) \times (6/6) = 18/30$$

$$\text{and, } (4/5) \times (6/6) = 24/30$$

The numbers in between  $18/30$  and  $24/30$  will be rational and will fall between  $3/5$  and  $4/5$ .

Hence,  $19/30$ ,  $20/30$ ,  $21/30$ ,  $22/30$ ,  $23/30$  are the 5 rational numbers between  $3/5$  and  $4/5$

**4. State whether the following statements are true or false. Give reasons for your answers.**

**(i) Every natural number is a whole number.**

Solution:

**True**

Natural numbers- Numbers starting from 1 to infinity (without fractions or decimals)

i.e., Natural numbers = 1, 2, 3, 4...

Whole numbers- Numbers starting from 0 to infinity (without fractions or decimals)

i.e., Whole numbers = 0, 1, 2, 3...

Or, we can say that whole numbers have all the elements of natural numbers and zero.

Every natural number is a whole number; however, every whole number is not a natural number.

**(ii) Every integer is a whole number.**

Solution:

**False**

Integers- Integers are collection of numbers that contain positive, negative and 0; excluding fractional and decimal numbers.

i.e., integers = {... -4, -3, -2, -1, 0, 1, 2, 3, 4...}

Whole numbers- Numbers starting from 0 to infinity (without fractions or decimals)

i.e., Whole numbers = 0, 1, 2, 3....

Hence, we can say that integers include whole numbers as well as negative numbers.

Every whole number is an integer; however, every integer is not a whole number.

**(iii) Every rational number is a whole number.**

Solution:

**False**

Rational numbers- All numbers in the form  $p/q$ , where  $p$  and  $q$  are integers and  $q \neq 0$ .

i.e., Rational numbers =  $0, \frac{19}{30}, 2, \frac{9}{-3}, -\frac{12}{7} \dots$

Whole numbers- Numbers starting from 0 to infinity (without fractions or decimals)

i.e., Whole numbers =  $0, 1, 2, 3, \dots$

Hence, we can say that integers includes whole numbers as well as negative numbers.

Every whole numbers are rational, however, every rational numbers are not whole numbers.
