

## **FIRST COURSE**

Type of Course - Classroom Class

Course Title - **Basic Stock Trading & Investment course**

Pin Code – 411001 (Dholepatil Road)

Course Fee – 7500.00

Course Duration – 15-20 HRS

Number of Students in a Batch – Minimum 2 – Maximum 5

Trainer – Avinash Lokhande

About this Course

Dear all,

New investors who are taking their first steps towards learning the basics of stock trading should have access to multiple sources of quality education. Just like riding a bike, trial and error coupled with the ability to keep pressing forth will eventually lead to success.

One great advantage of stock trading lies in the fact that the game itself lasts a lifetime. Investors have years to develop and hone their skills. Strategies used twenty years ago are still utilized today. The game is always in full force.

So for new investors wanting to take their first steps, I offer great answers to the simple question,

**“How do I get started?”**

**Find a mentor** - A mentor could be a family member, a friend, a past or current professor, co-worker, or any individual that has a fundamental understanding of the stock market. A good mentor is willing to answer questions, provide help, recommend useful resources, and keep spirits up when the market gets tough. All successful investors of the past and present have had mentors during their early days.

**Learn the Basics of Stock trading** – Join the course and understand all the basic details you should know before you start.

- Learn about the importance of savings.
- Identify avenues to invest the savings in a suitable investment vehicle.
- Understand the origins of business and its funding environment.
- Learn about how funding works and the stages of different funding.
- Explore the basics of stock trading and understand what makes the stocks move on a minute to minute basis and many more such concepts.

**Read and follow the market** - News sites such as Yahoo Finance and Google Finance serve as a great resource for new investors. For in depth coverage, look no further than the Wall Street Journal and Bloomberg. By monitoring the markets each day and reading headline stories investors can expose themselves to trends, 3rd party analysis, not to mention economic concepts and general business. Pulling quotes and observing fundamental data can also serve as another good source of exposure.

TV is another way to monitor the market each day with CNBC being the most popular channel. Even turning on CNBC for 15 minutes a day will broaden an investor's knowledge base. Don't let the lingo or the style of news be a nuisance, just simply watch and allow the commentators, interviews, and discussions to soak in. Beware though, over time you may find that a lot of the investing shows on TV are more of a distraction and are overall full of junk recommendations. This is a natural evolution; you are not alone!

## **SECOND COURSE**

Type of Course - Classroom Class

Course Title - **BASIC PLUS DERIVATIVES TRADING [F&O] ADVANCE MODULE**

Pin Code – 411001 (Dholepatil Road)

Course Fee – 12000.00

Course Duration – 20-25 HRS

Number of Students in a Batch – Minimum 2 – Maximum 5

Trainer – Avinash Lokhande

About this Course

Dear all,

New investors taking their first steps towards learning the basics of stock trading should have access to multiple sources of quality education. Just like riding a bike, trial and error coupled with the ability to keep pressing forth will eventually lead to success.

One great advantage of stock trading lies in the fact that the game itself lasts a lifetime. Investors have years to develop and hone their skills. Strategies used twenty years ago are still utilized today. The game is always in full force.

So for new investors wanting to take their first steps, I offer great answers to the simple question,

**“How do I get started?”**

**Find a mentor** - A mentor could be a family member, a friend, a past or current professor, co-worker, or any individual that has a fundamental understanding of the stock market. A good mentor is willing to answer questions, provide help, recommend useful resources, and keep spirits up when the market gets tough. All successful investors of the past and present have had mentors during their early days.

**Learn the Basics** - Futures and options represent two of the most common form of "Derivatives". Derivatives are financial instruments that derive their value from an 'underlying'. The underlying can be a stock issued by a company, a currency, Gold etc. The derivative instrument can be traded independently of the underlying asset.

## Join the course to understand –

- **What is the difference between futures and options?**

The main fundamental difference between options and futures lies in the obligations they put on their buyers and sellers. An option gives the buyer the right, but not the obligation to buy (or sell) a certain asset at a specific price at any time during the life of the contract.

- **What is a future in the stock market?**

In finance, a single-stock future (SSF) is a type of futures contract between two parties to exchange a specified number of stocks in a company for a price agreed today (the futures price or the strike price) with delivery occurring at a specified future date, the delivery date.

- **What is the meaning of F&O in stock market?**

Like share trading in the cash segment (buy & sell shares), derivative is another kind of trading instrument. They are special contracts whose value derives from an underlying security. Futures and Options (F&O) are two types of derivatives available for the trading in India stock markets.

## **THIRD COURSE**

Type of Course - Classroom Class

Course Title - **Fundamental Analysis & Technical Analysis course**

Pin Code – 411001 (Dholepatil Road)

Course Fee – 12000.00

Course Duration – 20-25 HRS

Number of Students in a Batch – Minimum 2 – Maximum 5

Trainer – Avinash Lokhande

About this Course

Dear all,

Just like riding a bike, trial and error coupled with the ability to keep pressing forth will eventually lead to success.

So for new students wanting to take their first steps in learning about Technical and Fundamental Analysis, I offer great answers to the simple question,

**“How do I get started?”**

**Find a mentor** - A mentor could be a family member, a friend, a past or current professor, co-worker, or any individual that has a fundamental understanding of the stock market. A good mentor is willing to answer questions, provide help, recommend useful resources, and keep

spirits up when the market gets tough. All successful investors of the past and present have had mentors during their early days.

### **Learn the Basics – Join the course to understand -**

- **What is difference between Fundamental Analysis & Technical Analysis?**

Fundamental analysts study everything from the overall economy and industry conditions to the financial condition and management of companies. Technical analysis is the evaluation of securities by means of studying statistics generated by market activity, such as past prices and volume.

- **What are the components of fundamental analysis?**

Fundamental research concentrates on finding and evaluating the dynamics that influence stock prices, whereas technical analysis (also known as “charting”) focuses strictly on analyzing market behavior. Equity research analysts are often divided into two camps as to which process is best.

- **What are the components of fundamental analysis?**

There are three components to fundamental analysis of a stock: financial statement analysis, valuation and qualitative factors. ... It also often identifies the important catalysts for the stocks upward or downward movements in the future.

- **What is Technical Analysis of Stocks?**

Technical analysis of stocks and trends is the academic study of historical chart patterns and trends of publicly traded stocks. Technical analysis of stocks and trends employs the use of tools such as bar or candlestick charts and trading volumes to determine the future behavior of a stock.

- **What is fundamental analysis of stocks?**

For stocks and equity instruments, this method uses revenues, earnings, future growth, return on equity, profit margins and other data to determine a company's underlying value and potential for future growth. In terms of stocks, fundamental analysis focuses on the financial statements of the company being evaluated.

- **What is good, Fundamental Analysis or Technical Analysis?**

The majority of investors who want to evaluate long-term investment decisions start with fundamental analysis of a company, an individual stock or the market as a whole. Fundamental analysis is the process of measuring a security's intrinsic value by evaluating all aspects of a business or market.
