[How do I set up SSH access for an Amazon EC2 instance?](#)

Basically, you need a private-key file to login into your EC2 via SSH. Follow these steps to create one:

- Go <https://console.aws.amazon.com/ec2/home> & sign in to your existing Amazon account.

- Click on "Key Pairs" on LHS or <https://console.aws.amazon.com/ec2/home?region=us-east-1#s=KeyPairs>.
 - You should see the list of KEYS generated by you (or during EC2 creation process).
 - Click on "Create Key Pair" if you don't see any or you lost your private-key.
 - Enter a unique name and hit enter.
 - A download panel will appear for you to save the private-key, save it.
 - Keep it somewhere with the file permission "0600"
- Click on "Instances" on LHS or <https://console.aws.amazon.com/ec2/home?region=us-east-1#s=Instances>
 - You should see the list of ec2-instances, if you don't see any, then please create one.
 - Click on the EC2 machine and note down the Public DNS address.
- Open your Terminal (in Linux) and type the following command
 - `ssh -i /path/to/private-key root@<ec2-public-dns-address>` - the root username has been avoided in the latest releases, based on your distribution select `ec2-user` or `ubuntu` as your username.
 - hit Enter
