The 44 Sounds (Phonemes) of English

The English alphabet has 26 letters, made up of consonants and vowels. There are five **vowels** (a,e,i,,o,u) and the rest are all **consonants**. In English, pronunciation of words centres upon syllables: a syllable is a unit of pronunciation which has one vowel sound, with or without surrounding consonants, forming the whole or a part of a word. For example, there are two syllables in wa/ter and three in in/fer/no.

The sounds of spoken language are known as **phonemes**. Thus, /water/ has two syllables but four phonemes: w/a/t/er; /inferno/ has three syllables but seven phonemes: i/n/f/e/r/n/o. Do not be fooled into thinking that the each letter has a corresponding phoneme, as in these two examples. A word like /tough/ has two syllables: t/ough and two phonemes: t/ough.

A phoneme is a speech sound. It's the smallest unit of sound that distinguishes one word from another. Since sounds cannot be written, we use letters to represent or stand for the sounds. In English, the written equivalent of sounds or phonemes are known as **graphemes**. A grapheme is the written representation (a letter or cluster of letters) of one sound. It is generally agreed that there are approximately 44 sounds in English, with some variation dependent on accent and articulation. The 44 English phonemes are represented by the 26 letters of the alphabet individually and in combination. Phonics instruction involves teaching the relationship between sounds and the letters used to represent them. There are hundreds of spelling alternatives that can be used to represent the 44 English phonemes. Only the most common sound / letter relationships need to be taught explicitly. The 44 English sounds can be divided into two major categories – consonants and vowels. A consonant sound is one in which the air flow is cut off, either partially or completely, when the sound is produced. In contrast, a vowel sound is one in which the air flow is unobstructed when the sound is made. The vowel sounds are the music, or movement, of our language. The 44 phonemes represented below are in line with the **International Phonetic Alphabet or IPA.**

There are some letters that are used to write down sounds already represented by other graphemes. For example we use the letter c to represent the /k/ sound (already represented by the grapheme 'k') and the /s/ sound (already represented by the grapheme 's').

Letter			
c	/k/ as in cat, cot, cup	/s/ as in city, cycle, cents	
x	/k//s/ as in box, fox, fix	/g//z/ as in example, exam	/z/ as in xylophone
q(u)*	/k//w/ as in queen	/k/ as in bouquet, marquis, cheque	

* the q is always paired with the letter u.

STRESS AND INTONATION

All words of more than one syllable have what is called **word stress**. This means that at least one of the syllables is **l-o-n-g-e-r** and **louder** than the other syllables.

In the following examples, stressed syllables are in capital letters:

PHOtograph phoTOgraphy photoGRAphic phoTOgrapher
 PENcil comMITtee volunTEER volunTArily
 MARYland soClety inforMAtion inFORM

In many cases, word stress must simply be learned as new vocabulary is acquired. However, there are several rules for word stress which can make it easier to deal with.
