When a country develops its technology…

Digitalization has empowered most of the nations across the globe. With its advancement, most of the traditional skills and methods are losing it existence, which are being replaced by more efficient practices. However, some people believe in preserving those skills and ways to which I stand in complete opposition and shall put forth my reasons for the same.

To begin with, newly developed skills have proven to be more optimal and time saving than old methods in order to complete a task. [Seema1]For example, electronic-mailing system has taken over hand written letters to send across ~~information~~the information and messages. The reason of its gaining popularity and adaptability is auto-correcting techniques, which are implemented as one~~we~~ writes a ~~the~~ message. In ~~addition~~ addition~~to~~, the message is delivered within fractions of a second ~~in seconds of time~~ unlike for a letter that reaches ~~to reach~~ in days, which in turn provides a medium for faster communication.[Seema2]

To bolster the argument, introduction of keyless system for an automobile is an excellent example, which has replaced the traditional practices of engine-ignition by inserting a key.
[Seema3]
Nowadays, most of the automobile companies are adopting and implementing keyless system that allows a user to start the vehicle with a simple press button. This practice of keyless car eliminates the possibility of key cloning to enhance security of a car.[Seema4]

To conclude ~~with,~~/In a nutshell,…….
It is highly recommended
 it's highly recommended that traditional skills and methods should be replaced with the advanced and efficient practices………. It is recommended~~necessary~~ for every nation to continuously evolve its technology and help their people to adapt and practice them in their everyday life.

OVERALL GOOD ATTEMPT!
