VEDIC MATHS

- Vedic Maths in short is set of awesome magic like scientific techniques which allows superfast arithmetic calculations; sometimes faster than calculator or computer!!
 - Vedic Maths techniques can help you solve most of the calculation problems in maximum of two steps
 - Vedic Maths has shortcuts for each and every branch of mathematics (that includes arithmetic, geometry- plane and solid, algebra, trigonometry- plane and solid, conics- geometrical and analytical, calculus-differential and integral)
 - Techniques are easy to understand, easy to apply, easy to remember with very less efforts required to learn them.
 - This techniques will surely change your attitude towards mathematics.
