

## QUADRATIC EQUATIONS-1

- 1.** If the equations  $2x^2 + kx - 5 = 0$  and  $x^2 - 3x - 4 = 0$  have a common root find the value of k.
- 2.** If  $\alpha, \beta$  are the roots of the equation  $2x^2 + 6x + b = 0$ , then the maximum value of  $\frac{\alpha}{\beta} + \frac{\beta}{\alpha}$ .
- 3.** the value of a so that the sum of the roots of the equation  $x^2 - (a-2)x - a - 1 = 0$
- 4.** The value of 'a' that the quadratic equation  $2x^2 - (a^3 + 8a - 1)x + a^2 - 4a = 0$  possess the roots of opposite sign. Ans:  $0 < a < 4$
- 5.** Let  $\alpha, \beta$  be the roots of the equation  $ax^2 + bx + c = 0$  and  $\gamma, \delta$  are the roots of the equation  $px^2 + qx + r = 0$ .  $D_1, D_2$  are the discriminants of the two equations and  $\alpha, \beta, \gamma, \delta$  are in A.P then find  $D_1 : D_2$
- 6.** Let  $\alpha, \beta$  be the roots of the equation  $ax^2 + bx + c = 0$  and  $\alpha + h, \beta + h$  are the roots of the equation  $px^2 + qx + r = 0$ .  $D_1, D_2$  are the discriminants of the two equations and then find  $D_1 : D_2$
- 7.** The ratio of the roots of the equation  $ax^2 + bx + c = 0$  is same as the ratio of the roots of the equation  $px^2 + qx + r = 0$ .  $D_1, D_2$  are the discriminants of the two equations and then find  $D_1 : D_2$
- 8.** If  $\alpha, \beta \in R$  are roots of the equation  $ax^2 + bx + c = 0$ . Find the condition that k lies between the roots of the equation.  
Solution:  $a f(k) < 0$
- 9.** If every pair from among the equations  $x^2 + px + qr = 0 = 0, x^2 + qx + pr = 0, x^2 + rx + pq = 0$  have a common root then find the sum of the common roots.  
Ans:  $p+q+r$
- 10.** Find the least integral value of a so that equation  $x^2 - 2(a-1)x + (2a+1) = 0$  has both roots positive. Ans: 4
- 11.** Find the set of values of a so that both roots of the equation  $x^2 - 4ax + 2a^2 - 3a + 5 = 0$  are greater than 2. (Ans:  $a > 9/2$ )
- 12.** The value of a for which the roots of the equation  $(1-a^2)x^2 + 2ax - 1 = 0$  has roots belonging to the interval (0,1). Ans:  $a > \frac{\sqrt{5}+1}{2}$
- 13.**  $\alpha, \beta$  are the roots of the equation  $x^2 - x + p = 0$  and  $\gamma, \delta$   $x^2 - 4x + q = 0$ . If  $\alpha, \beta, \gamma, \delta$  are in geometric progression then find the integral values of p and q. Ans: -2, -32
- 14.** Find the total number of integral values of a so that the equation  $x^2 + ax + a + 1 = 0$ . Ans: 2
- 15.** Find the number of possible integral values of a so that the equation  $x^2 + ax + 16 = 0$  has integral roots. ANS: 6 VALUES Hint: the discriminant should be a perfect square. i.e  $a^2 - 64 = \lambda^2$

$$\text{Therefore } 64 = 2 \times 32 = 4 \times 16 = 8 \times 8$$
